### **CLARANS**

MAD III Matej Kubinec (KUB0462)

VŠB-TUO

### **CLARANS**

(Clustering Large Applications based on RANdomized Search)

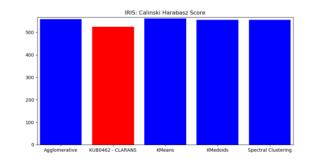

- Vylepšenie algoritmu CLARA
- Prezentuje trade-off medzi výpočetným výkonom a efektívnosťou použitím vzorkovania na vytvorenie zhlukov

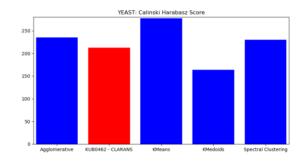

#### Parametre

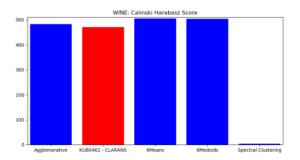

- -K počet zhlukov
- -NumLocal počet iterácií
- -MaxNeighbour maximálny počet susedov, ktorý sa vymenia

### Calinski Harabasz

- Zname aj ako Variance Ratio Criterion
- Pomer medzi rozptylom vnútri zhlukov a medzi zhlukmi navzájom

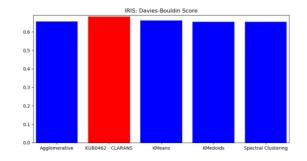

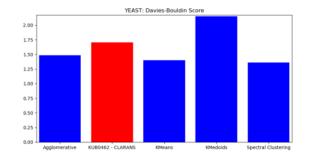

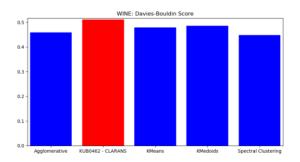

### **Davies-Bouldin**

- Vnútorné ohodnotenie
- Pomer medzi rozmiestnením vnútri zhluku a zhlukmi navzájom
- Nižšie skóre lepší výsledok

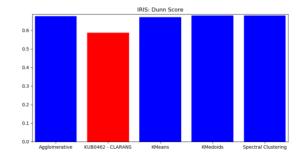

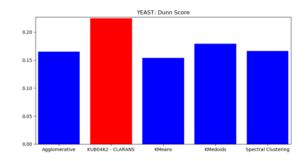

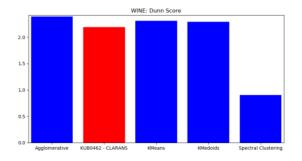

### **Dunn Index**

- Skóre záleží na použitej metrike (Euklidovská)
- •Pomer medzi minimálnou vzdialenosťou medzi zhlukmi a maximálnou vnútri zhluku

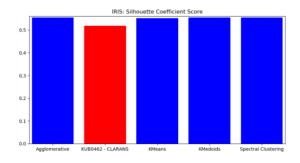

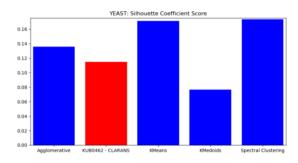

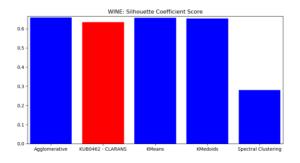

### Silhouette Coefficient

 Podobnosť objektov k ostatným v zhlukoch

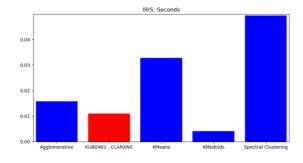

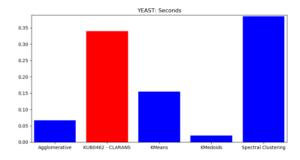

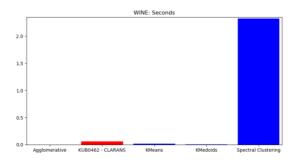

## Výkon

•Počet sekúnd behu programu.

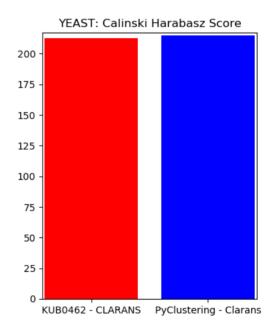

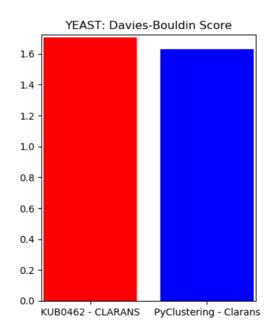

#### Calinksi Harabasz

- **-CLARANS** 212.65
- **-PyClustering** 215.03

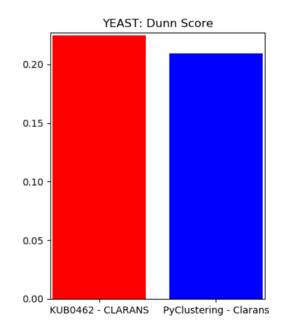

#### **Davies-Bouldin**

- -CLARANS 1.71
- **-PyClustering** − 1.63

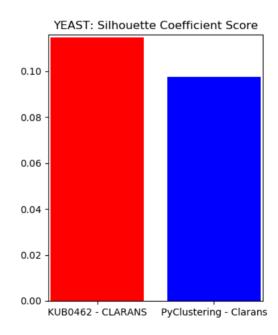

#### Dunn

- **-CLARANS** 0.22
- -PyClustering 0.20

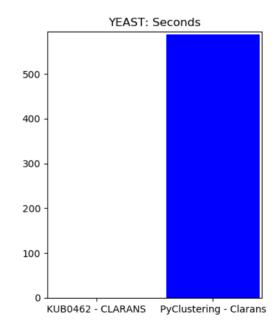

#### **Silhoette Coefficient**

- **-CLARANS** 0.11
- **-PyClustering** 0.09

#### Výkon

- -CLARANS 0.34 sekúnd
- -PyClustering 588.4 sekúnd

# Ďakujem za pozornosť
